

# TIFBLAIR

Centipede grass

TifBlair® Centipede is the first certified centipede on the market. TifBlair is more cold and drought tolerant than common centipede. Tests conducted over three winters in Blairsville, GA and Stillwater, OK demonstrated that TifBlair can survive severe winter temperatures. TifBlair can grow in low pH soils because of its deep root system. TifBlair is a low maintenance turf that is ideal for commercial and residential installations.

*A Turf for ALL Seasons...*

## BENEFITS

SUPERIOR cold hardiness
